1.2 Discussing whether list makes sense

Ronald Reagan, 40th president of the US between 1981 and 1989, is obviously at the top of the list by distance. *Margaret Thatcher, Turgut Özal, Yasuhiro Nakasone* were the prime ministers of that time. Seeing these names at the top of the list, we can infer that the majority of the news was political.

James Baker, secretary of treasury of the US, finds himself at the second position. He is related to the American economy, so it's very normal that he is at the top.
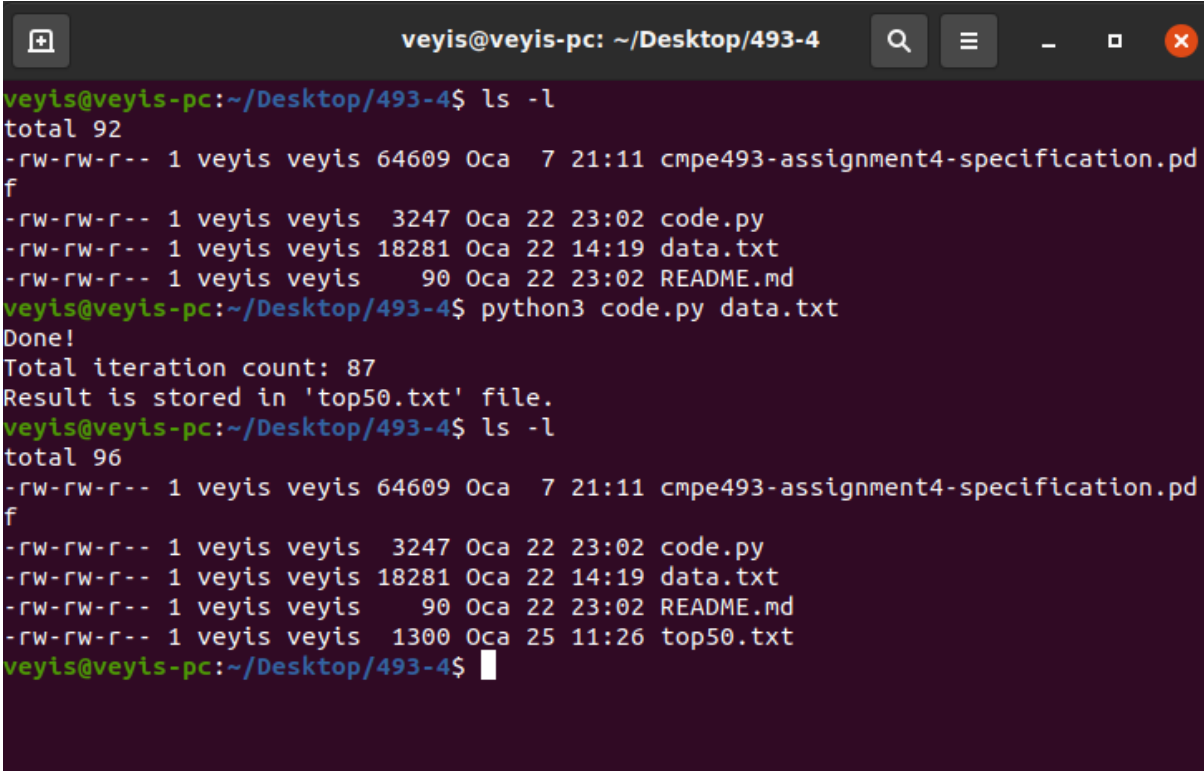

Franklin Roosevelt died in 1945, seeing him in the list is a bit surprising. Also former US presidents *Jimmy Carter, Richard Nixon* are in the list. We can say that the list is dominated by American political figures.

Demi Moore, if Moore in the list is her, was an American actress. Seeing a public who is not political is great.

Shinzo Abe, Saddam Hussein, Gorbachev, Andreas Papandreou are the political figures from other countries in the list.

Finally *John Paul*, the pope, is a religious figure who finds himself in the list.
